

- a. Text Classification – This will automatically assign predefined categories to the text documents based on the content. This is how our Gmail box works.
- b. Automated essay scoring (AES) – Based on different criterion such as grammar, spellings, relevance, coherence and etc., this application analyze the essays. This application uses machine learning algorithms and supervised data to come to a conclusion on essays.
- c. Clinical decision support system (CDSS) – This application analyse patients' medical history and diagnostic data, lab reports and other medical data to diagnose or suggest treatment plans based on these data. CDSS mostly uses unsupervised data when making decisions.
